Modal Popup Maker

User Guide

Table of contents:

1. Introduction

Modal Popup Maker is a great tool to create pop ups that get by pop up blockers. Follow these simple instructions to begin.
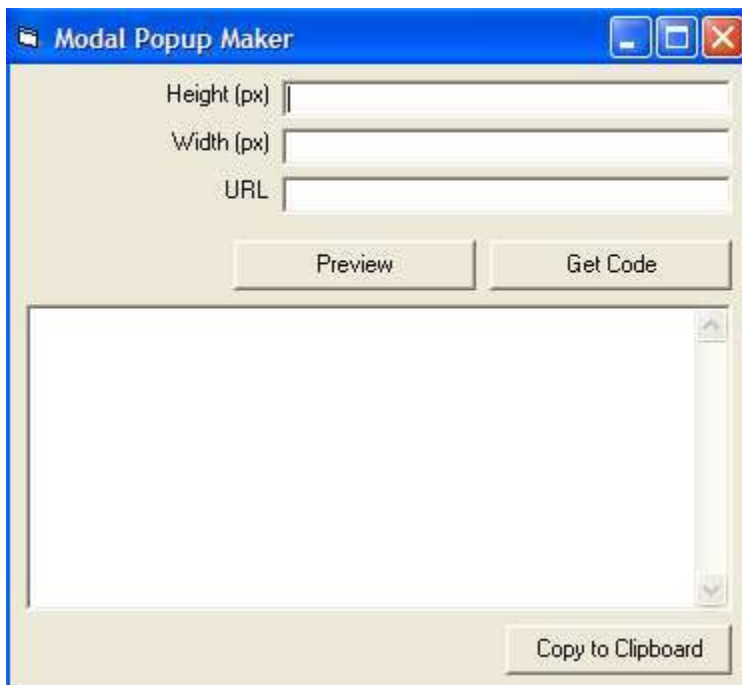

2. Installation Steps

2.1 Running the installer

Double click the Modal Popup Maker icon to open the program.

3. Usage

3.1 Below is what the interface looks like

You will need to input the Height, Width, and URL of the popup.

Once you have done this you may preview your popup. Once you are happy with your popup, press the Get Code button.

The code will then be displayed in the window. You can then select Copy to Clipboard.

Next, open your web page in an HTML editor and add the popup code to your body tag. Be sure not to overwrite any of your existing code. Simply add the popup code to the end of your body tag before the closing '>'.

NOTE: If you do not want the popup to open when a visitor clicks a link (ie. your order link), then you will need to add this code to the link:

onclick="onunload=null"

I hope you enjoy Modal Popup Maker!
